- a. The use case starts when the Citizen click the camera icon and elects to post a new photo(video) on the public wall.

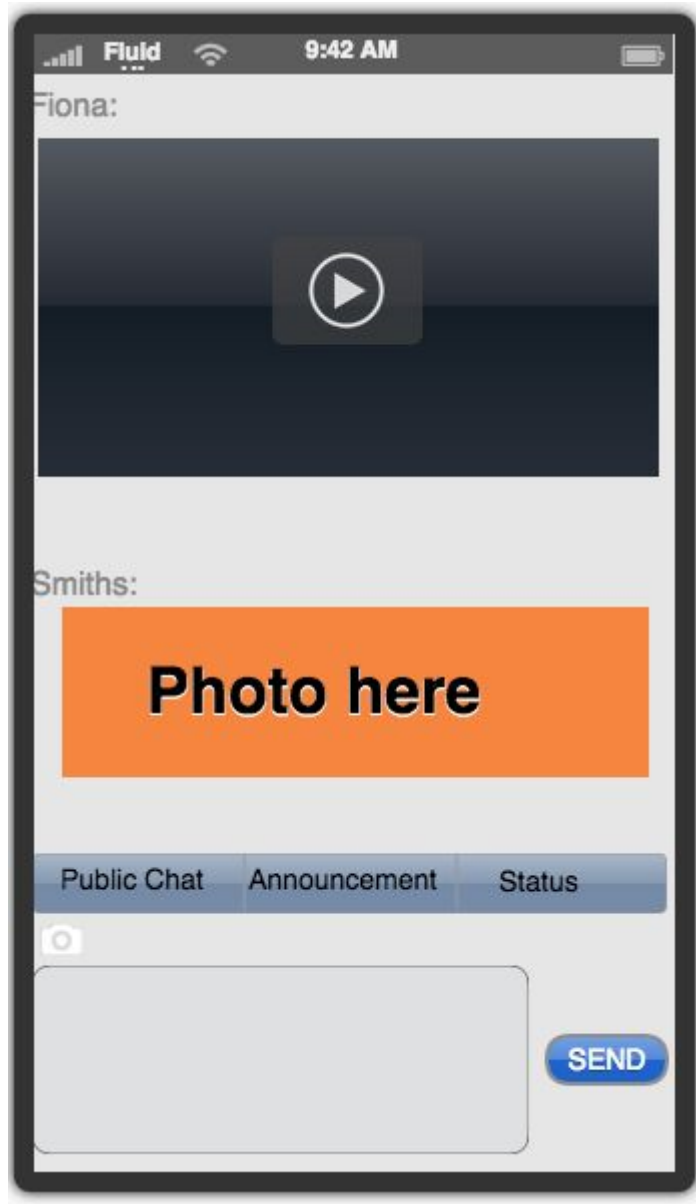

b. The system asks citizen to choose the source of new post("take a new one" or "upload one from gallery").

c. *If user choose to upload from gallery, the system will load the photo gallery of the phone When citizen click on specific photo or video in the gallery, this photo or video will be sent out.

- c. *if citizen choose "take a new one", the system will load the camera of the phone.

d. The system stores and displays the photo/video (together with sender name, time stamp, status at the time of post if available, and location if available) so other online users can see it.
